THE BIOLOGICAL ANTHROPOLOGY PROGRAM IN THE DEPARTMENT OF ANTHROPOLOGY AT THE UNIVERSITY OF MINNESOTA PROVIDES THEORETICAL AND METHODOLOGICAL TRAINING FOR STUDENTS IN EVOLUTIONARY ANATOMY, PRIMATE BEHAVIOR, EVOLUTION OF PRIMATE ANATOMY, ETHOLOGICAL AND PALEONTOLOGICAL FIELD TECHNIQUES, TAPHONOMY, AND HOMININ BEHAVIORAL RECONSTRUCTION.

DISTINGUISHING FEATURES OF THE PROGRAM INCLUDE: STATE-OF-THE-ART 3D DIGITAL SCANNING LAB; WORLD-CLASS PRIMATE SKELETAL COLLECTION; PALEONTOLOGICAL FIELD OPPORTUNITIES; PRIMATE BEHAVIORAL FIELD OPPORTUNITIES; COMPARATIVE MAMMAL SKELETAL COLLECTION; AND A HUMAN OSTEOSTICAL COLLECTION.

THE PROGRAM IS CLOSELY INTEGRATED WITH THE FACULTY IN PALEOLITHIC ARCHAEOLOGY.

STUDENTS AND FACULTY ALSO WORK WITH AND DRAW UPON THE EXPERTISE OF FACULTY IN OTHER DEPARTMENTS AT THE UNIVERSITY OF MINNESOTA, ESPECIALLY THE DEPARTMENT OF EARTH SCIENCES AND THE DEPARTMENT OF ECOLOGY, EVOLUTION, AND BEHAVIOR.
Kieran McNulty’s work focuses on the evolution of apes and humans, and the factors that influence morphological adaptation. His research specialties include human and primate evolution, geometric morphometrics, cranial ontogeny and evolution, and paleontology of East Africa. kmcnulty@umn.edu

Martha Tappen’s work focuses on reconstructing the behavior of early stone age hominins and questions regarding the nature of early meat-eating and hominin-carnivore interactions. Her focus is on the biogeographic expansion of humans beyond Africa into Eurasia using zooarchaeological and taphonomical methods. tappe004@umn.edu

Michael Wilson studies the behavior and ecology of chimpanzees at Gombe National Park, Tanzania. Study of our closest living relatives provides many fascinating insights into the possible lives of our ancestors and provides a context for understanding ourselves today. wils0198@umn.edu
